

On the <https://dev.dealls.com/> , when a regular user (not a mentor or employer) logs in, the frontend is still hitting <https://api.sejutacita.id/v2/mentoring/mentor/me> . Assume this endpoint is only used for mentor not regular users

## 1. Reproduce the issue

- Open <https://dev.dealls.com/>
- Click login button in navbar
- Login with regular user
- Click sign in button

## 2. Evidence

## 3. Endpoint

- Endpoint = <https://api.sejutacita.id/v2/mentoring/mentor/me>
- Request method = GET
- Status code = 400
- Response

```
{
  "data": null,
  "errorId": "36c91cbc977",
  "info": "user is not mentor",
  "messageId": "USER_IS_NOT_MENTOR",
  "traceId": "8fa9d46fb540b568df826563cd4fcd39"
}
```

## 4. Potential root cause

When a regular user logs in with a regular user account, the frontend tries to call this endpoint <https://api.sejutacita.id/v2/mentoring/mentor/me>. The frontend is asking for mentor data but the user is not a mentor. So the frontend calling the wrong endpoint without checking the user role
